

# Jerricson S. Garcia

Candaba, Pampanga | jerricsonsg@gmail.com | 09265415867 | github.com/Xciaaa

## Professional Summary

Motivated Computer Engineering graduate with practical experience in End User Computing, embedded systems, hardware wiring design, enterprise asset management, and technical support. Skilled in designing microcontroller-based hardware control architectures, diagnosing and resolving baseline Windows and macOS issues, and implementing hardware-to-network tracking systems. Combines strong technical troubleshooting skills with practical hardware integration to deliver reliable technical support and system uptime.

## Core Competencies & Technical Skills

|                        |                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| IT Support & Systems   | First-Level Technical Support, End-User Computing, Windows & macOS Diagnostics, Hardware Assembly & Peripheral Setup, User Acceptance Testing (UAT) Support |
| Asset Management       | Enterprise Asset Tracking, Asset Lifecycle Logistics, Centralized Inventory Databases, On-Site Server / Mini PC Setup                                       |
| Hardware & IoT Systems | RP2040 & ESP32 Microcontrollers, Hardware Wiring Architecture, Servo Motors, RTC Modules, NFC & Data Matrix Scanners, Embedded Systems Integration          |
| Programming & Tools    | Figma, JavaScript, HTML/CSS, Dart, Flutter, Node.js, Git/GitHub, VS Code, Android Studio, Microsoft Office / Excel, Adobe Lightroom, Adobe Photoshop        |
| Soft Skills            | Technical Communication, Problem Solving, Time Management, Receptive to Feedback, Customer-Focused Support, Digital Art                                     |

## Work Experience

End User Computing Intern | Adventus IT Services (Philippines) Inc. June 2025 – August 2025

- Provided first-level technical support to end-users by troubleshooting hardware, operating systems, and peripheral connectivity issues to ensure business continuity.

- Delivered baseline Windows and macOS troubleshooting during hardware deployments, verifying full system operational readiness prior to User Acceptance Testing (UAT) handoff.
- Managed the nationwide tracking and lifecycle logistics of enterprise computer assets using centralized Microsoft Excel asset tracking systems.
- Authored professional client-facing communications and technical status reports regarding asset distribution and retrieval schedules.

## Technical & IT Projects

---

### Inventory Management System for Laptops (IMS-L) | Bulacan State University - Bustos 2026

- Designed and deployed a localized hardware-to-web inventory management system to automate IT asset tracking within a campus computer laboratory.
- Engineered an automated smart cabinet prototype using an RP2040-Zero microcontroller integrated with an NFC module and Data Matrix scanner for physical device authentication.
- Configured a real-time WebSocket data pipeline connecting physical scanner hardware to a local database hosted on an on-site HP Mini PC for instant logging.

### Automated Medical Pill Dispenser Hardware Wiring & System Design | Hardware Project 2026

- Designed the electrical schematic and hardware control
- architecture for a microcontroller-based automated medical pill dispenser using precision servo motors and real-time clock (RTC) scheduling modules. Integrated audio-visual alert hardware (Buzzer & OLED display) alongside IR obstacle detection sensors to verify successful medicine dosage retrieval and prevent dispensing errors.
- Implemented clean wiring architecture and power distribution regulation to protect sensitive microcontrollers and mechanical actuators during continuous scheduled operations.

### Real-Time Multi-User Communication Application | Personal Project 2026

- Developed a full-stack client-server system using Flutter, Node.js, RESTful APIs, and WebSockets for real-time data persistence and session management.
- Implemented user authentication, encrypted data handling, and server-side logic to handle concurrent active user connections.

## Education

---

### Bachelor of Science in Computer Engineering | Bulacan State University - Bustos 2022 – 2026
